

Whether you agree or disagree with satellite radio I believe that this country was formed as a free society to allow people to make their own way. No one group should have a monopoly on information that can be provided to the public. That is why I support the right of XM Radio and other satellite radio systems to broadcast local news, weather and traffic to their subscribers. The NBA is taking a stance on this issue that is contrary to what our country stands for. Please pass no legislation that limits a company from competing. Let the people decide what to listen to.

Thank you,

Bob Ferrigno
